

Caledon

SPRING OATS

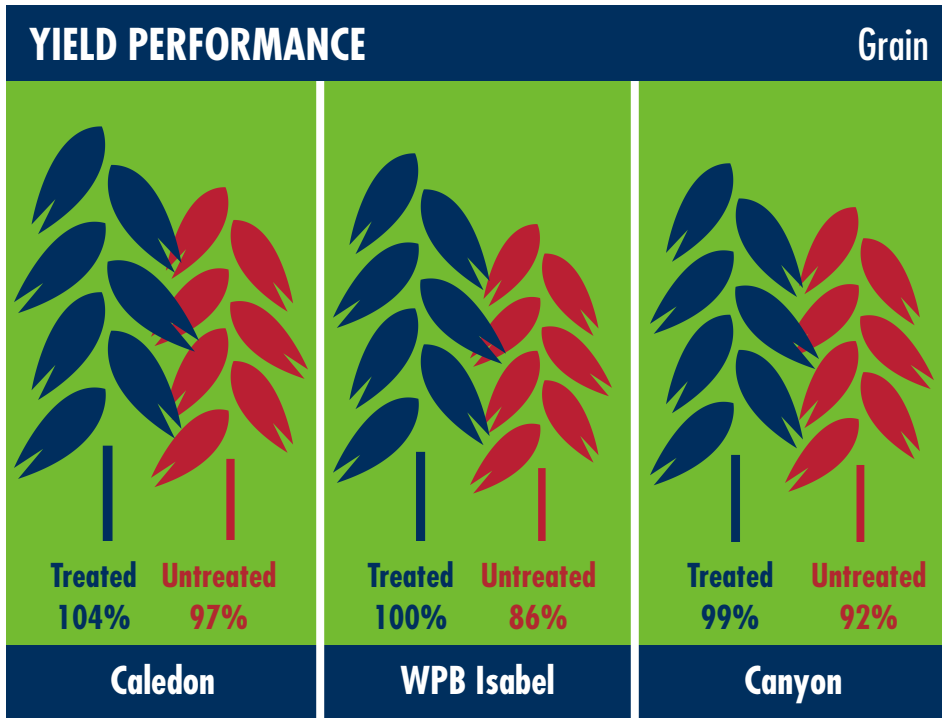

Caledon is a step change in spring oats with an exceptional yield and equally matching high quality.

Both its treated and untreated yield are the highest on the Recommended List (RL).

It has a robust agronomic package with the best disease resistance and excellent standing.

Caledon will be of significant interest to millers and is a variety we expect to be in the market for some time.

- ➔ Caledon is the highest yielding spring oat variety on the recommended list.
- ➔ Caledon is a significant step up in yield and quality.
- ➔ Caledon has had consistent high level performance over the last 5 years.
- ➔ Caledon has the highest resistance to crown rust on the RL.

Spring Oats

AGRONOMIC DATA	
Lodging (1-9)	7
Straw Length (cm)	114
Ripening Days (+/- WPB Isabel)	-1

AHDB DL 2026

GRAIN QUALITY	
Specific Weight (kg/hl)	51.4
Kernel Content (%)	72.4
Screenings (% through 2mm)	2.1

DISEASE (1-9)	
Mildew	8
Crown Rust	6

➔ Spring oats provide a break crop in the rotation and give an opportunity to 'clean up' the seedbed over winter.

➔ Modify seedrates to the seedbed quality and drilling date.

➔ Drill your Spring Oats as soon as conditions allow, into a fine, firm seedbed, drilling late February/ Early March is worth 0.5 t/ha as compared to drilling 4 weeks later.
