

Jacky

SPRING OATS

Jacky is a spring oat with market leading yield and quality. It is especially adapted to northern conditions.

Over the past 3 years of official trials Jacky has been the highest yielding variety in treated and untreated trials in northern England and Scotland.

Jacky has performed consistently at this high level for yield and still produces excellent quality.

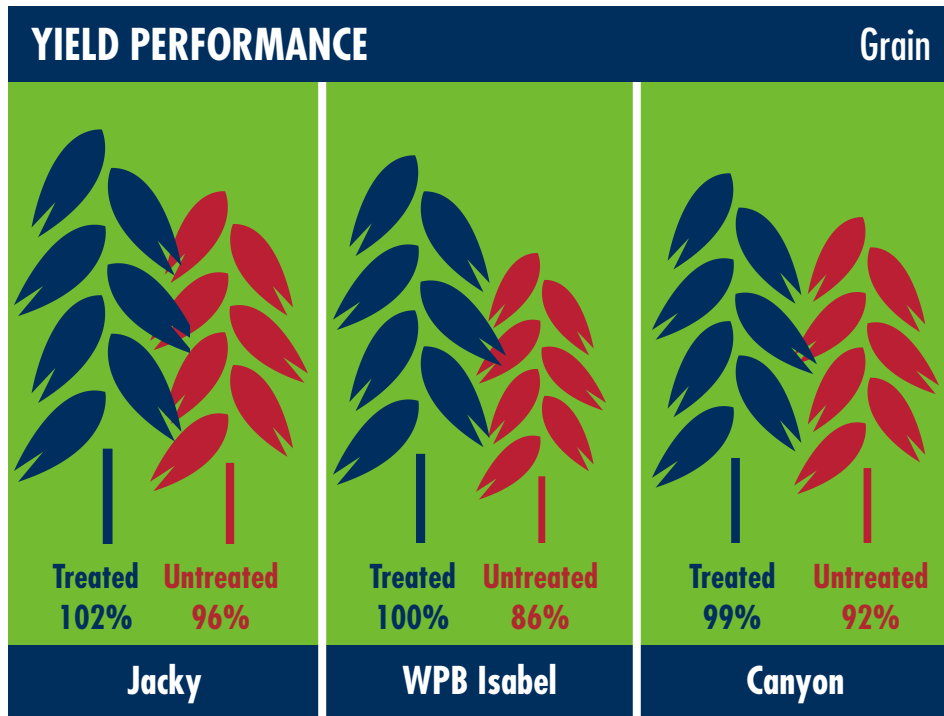

Jacky is the new, consistent, quality spring oat for the north.

➔ Jacky is the 'Jack of all Trades' and has outstanding yield and quality.

➔ Jacky has the highest treated and untreated yield on Northern sites over the past 3 years.

➔ Jacky is big, bold and a strong plant.

➔ Jacky performs well in all areas but loves it up north.

Spring Oats

AGRONOMIC DATA	
Lodging (1-9)	7
Straw Length (cm)	119
Ripening Days (+/- WPB Isabel)	-1

AHDB DL 2026

GRAIN QUALITY	
Specific Weight (kg/hl)	51.2
Kernel Content (%)	72.9
Screenings (% through 2mm)	2.6

DISEASE (1-9)	
Mildew	8
Crown Rust	4

➔ Spring oats provide a break crop in the rotation and give an opportunity to 'clean up' the seedbed over winter.

➔ Modify seedrates to the seedbed quality and drilling date.

➔ Drill your Spring Oats as soon as conditions allow, into a fine, firm seedbed, drilling late February/ Early March is worth 0.5 t/ha as compared to drilling 4 weeks later.
